**Crenlo switches to eco-friendly paint system
for Emcor Enclosures**

Transition to powder paint helps environment, improves durability of finish

ROCHESTER, Minn. (May 25, 2010) — Crenlo®, a Dover® company (NYSE:DOV), is pleased to announce Emcor® Enclosures' successful transition to a powder-paint finishing system that is more environmentally friendly and improves finish durability.

Crenlo's conversion from a liquid-paint finishing system to powder paint for its Emcor Enclosures drastically reduces pollutant emissions, hazardous waste production and energy consumption while providing the products greater protection and wear resistance.

"We are proud to show our commitment to environmental responsibility and high-quality products," said Greg Wetzel, general manager of enclosures at Crenlo. "Our valued customers across all markets will benefit from this positive change."

The powder-paint finishing system uses improved design and increased equipment efficiency to cut pollutant emissions and hazardous waste production by as much as 90 percent and lower energy consumption by up to 30 percent. Meanwhile, the powder-paint coating gives Emcor Enclosures a thicker, harder surface than liquid paint, resulting in increased resistance to abrasion, chipping, cracking, peeling, fading and corrosion.

Crenlo continues to offer customers a variety of standard colors — including antique white, neutral, graystone, Caribbean, fawn, steel, putty, hi-tech gray and black — and to support requests for custom colors on Emcor Enclosures.

Crenlo, under the Emcor trademark, designs, manufactures and integrates electronic equipment enclosures and consoles for technological applications. With nearly 60 years of experience providing enclosure solutions to a diverse customer base, the company offers five standard Emcor Enclosures product lines as well as modified and custom options.
