

## FOR IMMEDIATE RELEASE

### Emcor Introduces New Line of Wall Mount Enclosures

ROCHESTER, MN – April 1, 2008 – Peggy Elliott, Emcor's Manager, Enclosure Sales And Engineering, announced today the release of Emcor's new Wall-Mount Electronic Equipment Enclosures.

Elliott stated, "The new wall-mount enclosures represent a significant addition to Emcor's standard product lines. The new enclosures are designed for use anywhere that space is an issue. These rugged 19 inch welded cabinets provide the same legendary quality of materials and construction that all Emcor racks are noted for".

Enclosures come completely assembled with lockable front door and rear panel. The entire enclosure can be rotated to allow the cabinet (center) section to open either to the left or right. The front door can also be rotated for left or right hinged applications.

The cabinet section has openings on the top, bottom, and both sides. The vented panels are interchangeable and are available in solid, slotted, or fan panel configurations.

The hinged wall-mount section has cable access knockouts located on the top and bottom flange for fast, easy cable management.

Enclosures are available in 24.5" and 32" cabinet section depths, and 12U and 18U openings. Enclosures are also available in nine contemporary paint colors.

#### About EMCOR Enclosures:

EMCOR Enclosures is headquartered in Rochester, MN and is an ISO 9001-2000 registered manufacturer of state of the art electronic enclosures for a variety of markets, including security, test and measurement, and air traffic control.
